

NM VOICES FOR CHILDREN CHILDREN'S CHARTER

# Our Vision for the Next Generation

All children and their families are economically secure.

All children and their families have a high-quality cradle-to-career system of care and education.

All children and their families have quality health care and supportive health programs.

All children and their families are free from discrimination based on race, ethnicity, religion, disability, gender, sexual orientation, or country of origin.

All children and their families live in safe and supportive communities.

All children and their families' interests and needs are adequately represented in all levels of government through effective civic participation and protection of voters' rights.

All children and their families' needs are a high priority in local, state, and federal budgets and benefit from a tax system that is fair, transparent, and that generates sufficient revenues.

### METHODOLOGY & SOURCES

- 64 Methodology
- Major Data Sources
- Other Data Sources

### WHEN WE PLANT A GARDEN, WE ARE CAREFUL TO INCLUDE ALL THE INGREDIENTS IT NEEDS IN ORDER TO THRIVE: good soil,

fertilizer, water, sunlight, and more. For the best results, we tend it regularly, remove weeds and guard against pests. If we choose, instead, to starve our garden of water, light, or any of the other components for growth, we shouldn't be surprised when the results are less than optimal.

Children are not plants in gardens, of course, but like plants they need certain ingredients in order to grow and reach their unique potential. Parents provide the most important of these ingredients love, nurturing, and meeting basic needs like food and shelter - within the micro-garden that is the family. But families need tending too. Families, and the communities in which they live, need access to opportunities that come by way of the public support systems we all depend upon - our education and health care systems, infrastructure, and public safety services, to name just a few. But for the past ten years, New Mexico's public systems have been starved of the funds necessary for them to function effectively and equitably.

The culmination of this decade of austerity policy was bad news for New Mexico's children. For the second time in the past five years, New Mexico fell to dead last in the nation for child well-being, as ranked by the Annie E. Casey Foundation's KIDS COUNT program. For the third year in a row, we ranked last in educational outcomes and we lost all of the gains we had made in health during the previous years. We continue to have one of the highest rates of child poverty in the nation.

# WHAT COULD WE DO WITH \$800 MILLION?

### **WE COULD**

expand our early childhood care and learning system to reach all children who need it...

### AND

cover another 48,000 people with health insurance...

### AND

double the Working Families Tax Credit for families who work hard but are paid low wages...

### **NEW MEXICO'S KIDS COUNT STORY**

KIDS COUNT is a nationwide effort to track the status and well-being of children in each state and across the nation in four areas – economic well-being, education, health, and family and community – measuring four indicators in each of these domains, for a total of 16 tracked indicators. KIDS COUNT is driven by research showing that the consequences of what kids experience in childhood are carried with them for the rest of their lives. Children's chances of being healthy, doing well in school, and growing up to be productive and contributing members of society are tied most profoundly to their experiences in the early years. Statistics reported in the New Mexico KIDS COUNT Data Book show us where we stand, where we're doing better, and where and how we need to improve.

At its heart though, KIDS COUNT tells a story. It tells a story of child well-being and a story of the opportunities that are available to our kids. Unfortunately, in New Mexico, that story isn't as positive as it should be. In our state, the data show that we're not doing a very good job of ensuring adequate and equitable opportunities for all of our kids to thrive and succeed, and as a result, too many of our kids are struggling. Just as alarming as the fact that we rank 50th in overall child well-being is the fact that we rank poorly in each of the four KIDS COUNT domain areas: we're 49th in economic well-being; 50th in education; 48th in health; and, for the second year, we're 49th in the family and community domain.

What these data fail to tell us is why things are the way they are – how we got here and which direction will lead us out. As Americans, we believe that hard work will pull us out of poverty. But if that's the case, why does New Mexico have some of

the highest rates of poverty among people who work full time and year round? If education is the answer, why do we have a high rate of people living in poverty despite having bachelor's degrees? This tells us that there are systemic components to poverty - barriers beyond hard work and even education that keep people from getting ahead. One of New Mexico's main barriers to family economic security is the lack of jobs that pay a family-sustaining wage. Low-wage jobs are less likely to include benefits such as paid sick or family leave and health insurance, both of which vastly improve a family's economic well-being. Without higher-paying jobs, parents struggle to afford everything from child care to putting enough food on the table. Children growing up in families with fewer economic means are more likely to be homeless, to be food insecure, and to live in neighborhoods where they witness violence, and they have less access to enriching educational resources outside of the classroom. When children start school already behind peers whose families have more resources, they tend to stay behind.

Other challenges include policies and practices that have prevented people of color from building wealth and have resulted in generational poverty. One policy, for example, was the practice of red-lining, which effectively kept families of color from receiving low-interest FHA mortgages during the mid-20th century when the nation's middle class blossomed. The War on Drugs has had a highly disproportionate impact on communities of color despite the fact that whites use illicit drugs at the same rates as do people of color. Children of color are also more likely than their white, non-Hispanic peers to be suspended or expelled from school for the same offenses. Race-based disparities are of particular concern in a state where 60 percent of the population and 75 percent of children are people of color.

### AND

give a \$2,000 college scholarship to every high school student in the 2019 graduating class...

### AND STILL HAVE MONEY LEFT OVER.

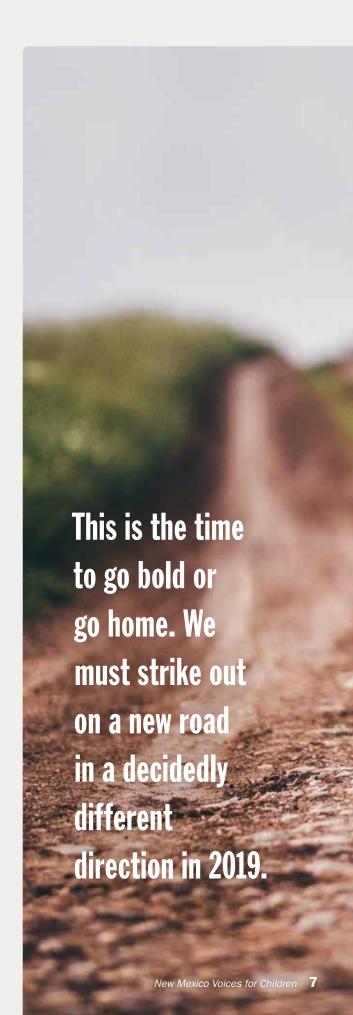

But disparities along racial lines don't just happen. They are a product of systems and structures that benefit some groups while putting other groups at a disadvantage. Equity is also intentional and only comes about when all people have the same opportunity to participate in society.

Equity and child well-being are not things that should concern just our parents and the families that experience hurdles to success, they should concern us all. When our children fail to thrive, it is a sign of a deeper problem. It means our families, our communities, and our economy aren't thriving either.

# TAKING THE NEXT EXIT OFF THE ROAD TO AUSTERITY

New Mexico is not dead last in so many indicators by any fluke or mischance. We're here because of poor policy choices we have made. The state has been on a road to austerity for the past decade. It started with the Great Recession, and the decision on the part of most policymakers to cut spending on the systems that support our communities, families, and children – like education, health care, and public safety – rather than raise new revenue so we could keep these systems whole and ensure opportunity for all New Mexicans.

If we had made these investments, New Mexico could have recovered from the recession much sooner than it did. But even after the first few painful years of the recession were behind us, we continued on the same path. In 2008, New Mexico spent \$6.1 billion annually on education, health care, public safety, and more. If we had kept to those 2008 spending levels and grown our budget just enough to keep up with inflation, our

budget today would be \$7.1 billion. But it is not. The current budget is just \$6.3 billion – which is actually worth \$800 million less than it was worth in 2008. And that is not even accounting for our population growth since 2008. What could we do with that \$800 million? We could finally expand our early childhood care and learning system to reach all children who need it, and we could cover another 48,000 people with health insurance, and double the Working Families Tax Credit for families who work hard but are paid low wages, and give \$2,000 college scholarships to every high school student in the 2019 graduating class, and have money left over.

What did we do with all that money instead? We gave it away to the well-connected in tax cuts that we were told would bring jobs. But the jobs never materialized. Instead, we have a state government working on such a skeletal crew that it can't provide basic services. Our tax department doesn't have enough staff to process tax returns, our child protective division is overloaded, and we are facing a significant teacher shortage, among other problems.

These tax-cuts-for-no-jobs forced us to make spending cuts – and education was one of the worst hit areas. New Mexico has cut funding to our colleges and universities by 35 percent on a per-student, inflation-adjusted basis since the recession, and we drained the money in the College Affordability Fund – which is supposed to go to students in need of financial aid – to pay for unrelated programs and services. This decade worth of cuts has driven steep tuition increases.

Also over the last ten years, New Mexico has cut K-12 education by 14 percent on a per-student, inflation-adjusted basis. The cuts to education were so bad that a lawsuit was mounted against the state for failing to provide a sufficient education, as required by the state constitution. Shortly after the state lost that lawsuit, it was hit with more lawsuits. These suits claim that the Children, Youth and Families Department has failed to protect children who were in its custody for their own safety from further harm. Simply put, we've been trying to run our state on the cheap. And no one has suffered for it more than our children.

# TURNING THE CURVE ON CHILD WELL-BEING

Despite the dreary statistics, we are optimistic about the future because we believe in the strength and resiliency of New Mexico's families. We know we can build stronger communities and support more resilient families and children so that they can thrive. What's more, we know how to create those opportunities. But we can only build a stronger New Mexico if we are willing to make the investments. At the governmental level, this means finding ways to raise new revenue - ways that do not hurt the very families who most need help. It means making our state tax system fairer by ensuring that everyone shares in responsibility for creating opportunity. It means raising teacher pay, calling for a higher minimum wage, fighting right-to-work laws that weaken unions, requiring meaningful protection from predatory lenders, and more. And we know that the more we invest in high-quality programs and services that reach children in their most formative years – from prenatally to age five – the more money we save in the future. You will find more specifics on these and other policy recommendations in the first section of this data book, along with trends and county-level data.

With a brand-new governor, this is the perfect time to change our course – to turn from austerity onto a road to opportunity. The first legislative session of a new governor's term is always a long session – meaning it lasts for 60 days and lawmakers can address whatever policy issues they desire. This is the time to go bold or go home. We must strike out on a new road in a decidedly different direction in 2019.

New Mexico's unique cultural diversity, great natural beauty, and enduring sense of community make it a resilient state. Our families, communities, and state are strongest when everyone has opportunities to thrive. But too many of our children and their families are being denied access to the opportunities we all need in order to thrive. We're all in this together and it's time to take better care of the garden that is our beautiful state.

### **ECONOMIC WELL-BEING**

# CHILDREN LIVING IN **POVERTY**

### DEFINITION

The percentage of children (ages 0 to 17) living at or below the federal poverty level (FPL). The FPL for a family of three was \$20,420 in 2017 (the year these data were collected).

### THE EXTENT OF THE PROBLEM

New Mexico's future economic success and the quality of our future workforce is determined, in large part, by what sorts of opportunities our children have today. Children who live in poverty - such as the 131,000 children in New Mexico - have access to fewer of the resources that all children need to help them thrive, succeed, and achieve their full potential. Evidence suggests being born into and growing up in poverty and low socioeconomic status can have long-lasting and powerful effects on children. Childhood poverty is linked to a variety of health, cognitive, and emotional risk factors for children, and children in poverty are more likely to be food insecure, to suffer from adverse childhood experiences like abuse and homelessness, and to live in poverty as adults.

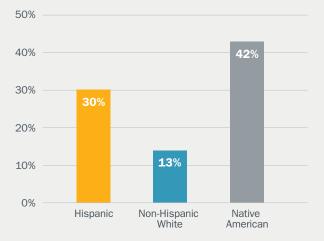

## **TRENDS** Children Living in Poverty New Mexico United States by Year (2008-2017) 35% 30% 25% 20% 15%

SOURCE: U.S. Census Bureau, American Community Surveys from 2008 to 2017, Table S1701.

### RACE & ETHNICITY

### Children Living in Poverty by Race and Ethnicity (2017)

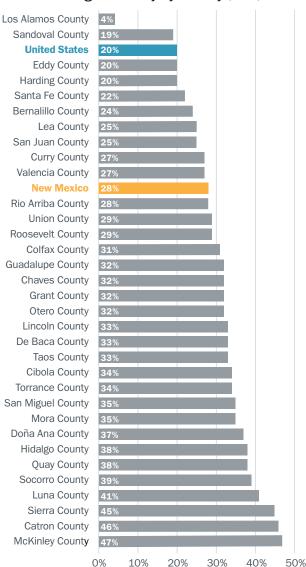

SOURCE: U.S. Census Bureau, American Community Survey, 2017, Table C17001. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

The rate and number of children living in poverty markedly decreased from 2016 to 2017, which is good news for our state. However, with 27 percent of our children living at or below the federal poverty level, New Mexico still ranks poorly at 48th in the nation in child poverty. Rates are particularly high among young children (29 percent), Hispanic children (30 percent), and Native American children (42 percent). New Mexico's child poverty rate has improved this year, but over the long-term nearly 12,000 more kids live in poverty now than did in 2008 – a 10 percent increase. While most other states have recovered from the recession, New Mexico's economy has not fully rebounded yet which means fewer families have the opportunity to lift themselves out of poverty. In addition to a slow economic recovery, income inequality has worsened over time, and the state has seen few policy improvements to address this issue.

### RANKINGS

### Children Living in Poverty by County (2016)

SOURCE: U.S. Census Bureau, Small Area Income and Poverty Estimates, 2016

### **POLICY SOLUTIONS**

### To Decrease Child Poverty:

- Support two-generation approaches so that there is better coordination of programs providing health, education, housing, and food services for both parents and children.
- Increase eligibility levels for child care assistance to at least 200 percent of the federal poverty level (FPL) and provide continuous eligibility through 300 percent of the FPL so parents can accept pay raises without suddenly losing benefits through what's called the "cliff effect"; and scale co-pays for families receiving child care assistance to their incomes so that copays do not put an undue burden on low-income families.
- Raise the state's minimum wage to \$12 an hour over two years and then index it to rise with inflation; and eliminate the tipped wage.
- Increase refundable tax credits like the WFTC (Working Families Tax Credit) and LICTR (Low Income Comprehensive Tax Rebate), and enact a more progressive income tax system so low-income families do not bear a disproportionate responsibility for funding our state.
- Protect SNAP (Supplemental Nutrition Assistance Program) from eligibility changes that would decrease the number of children receiving these benefits.
- Increase the amount of cash assistance that families on TANF (Temporary Assistance for Needy Families) receive; and remove harmful full-family sanctions and time limits.
- Enact tougher restrictions on predatory loans (payday, car title loans, tax refund loans, etc.), which can trap poor and low-income families in an endless cycle of increasing debt.
- Ensure that all workers can earn at least one week of paid sick leave per year.
- Enact policies to end wage theft.
- Support and promote the availability of resources and assistance for grandparents helping to raise their grandchildren, including access to financial resources, legal services, food and housing assistance, medical care, and transportation.
- Fund navigators to ensure that kinship foster care families have access to the public benefits for which they are eligible.
- Implement a new state Child Tax Credit in order to reduce child poverty and offset the negative impact of federal tax reform on New Mexico families.

**ECONOMIC WELL-BEING** 

# PARENTS WITHOUT **SECURE EMPLOYMENT**

### **DEFINITION**

The percentage of children (ages 0 to 17) living in families where no parent has full-time and year-round employment.

### THE EXTENT OF THE PROBLEM

More than a third of New Mexico's children live in families where no parent has secure employment, with Hispanic and Native American children most likely to be in such precarious financial situations. Parents who lack secure employment may be employed part time or seasonally because there aren't enough jobs available, given that New Mexico has the highest rate of longterm unemployment, or residents who are persistent in looking for work. Other parents may not have the education or skills that match the jobs that are available. These parents are more likely to live in poverty and less likely to have access to jobs that pay a living wage or provide benefits such as health insurance and sick leave, which hurts both them and their families.

## **TRENDS** Children Living in Families Where No Parent Had Secure New Mexico Employment by Year (2008–2016) United States 40% 35% 30% 25%

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau. American Community Surveys, 2008-2016.

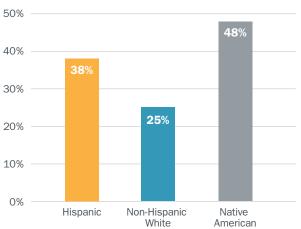

The percentage of children living in families where no parent has secure employment got slightly worse from 2015 to 2016, going from 34 percent to 36 percent. This is unlike the national trend of year-over-year improvement. We are now ranked 49th nationally on this indicator, down from last year's ranking of 44th. This indicator has worsened over the long-term, with a 17 percent increase since 2008 in the number of kids living in families where no parent has secure employment.

### **RACE & ETHNICITY**

### Children Living in Families Where No Parent Had Secure Employment by Race and Ethnicity (2016)

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau, American Community Survey, 2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

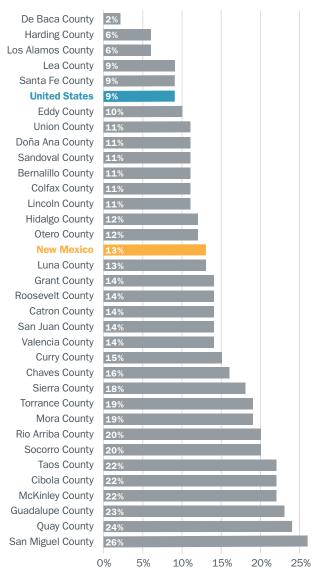

### **POLICY SOLUTIONS**

### To Improve Employment Levels for Parents:

- Increase eligibility levels for child care assistance to at least 200 percent of the federal poverty level (FPL) and provide continuous eligibility through 300 percent of the FPL so parents can accept pay raises without losing benefits; and scale co-pays for families receiving child care assistance to their incomes so that copays do not put an undue burden on low-income families.
- Protect unemployment insurance and reinstate benefits for child dependents to help tide over families during a rough economic patch. Before the recession, those receiving unemployment benefits received a small additional benefit for each dependent child, but this support was cut in 2011.
- · Enact narrow, targeted economic development initiatives and require accountability for tax breaks to corporations so that tax benefits are only received if quality jobs are created. Tax breaks that do not clearly create jobs should be repealed so the state can invest more money in effective economic and workforce development strategies.
- · Expand access to high school equivalency, adult basic education (ABE), job training, and career pathways programs.

### RANKINGS

### Families with Children in Which No Parent is Working by County (2012–2016)

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B23007.

### **ECONOMIC WELL-BEING**

# HIGH HOUSING COST BURDENS

### **DEFINITION**

The percentage of children (ages 0 to 17) living in families that spend 30 percent or more of their income on housing.

### THE EXTENT OF THE PROBLEM

Thirty-two percent of New Mexico kids live in households that have a high housing cost burden. The rate is even higher among Hispanic children (35 percent). High housing cost burdens can push families into substandard housing, and mean that many - especially low-income families - have little to spend on food, health care, utilities, and child care. Substandard housing units are also more likely to be hazardous, in unsafe areas, or pose health risks (such as having radon, mold, or asbestos) for the families living in them. In contrast, children whose families own a home do better in school, and families feel more invested in their neighborhoods.

### **TRENDS** Children in Households with a High Housing Cost Burden New Mexico United States by Year (2008–2016) 45% 40% 35% 30% 25% SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau,

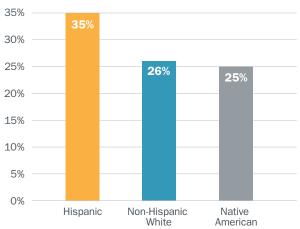

American Community Surveys, 2008-2016.

The number of children in families burdened by high housing costs increased by 2,000 from 2015 to 2016 as New Mexico's rate of children in this situation increased slightly to 32 percent. Since nearly all other states saw improvement over this same time period, New Mexico's nation-wide rank dropped from 27th to 37th in this indicator. Though the number of children living in households with a high housing cost burden has improved since its worst point in 2011, we've seen no real improvements over a longer time period.

### RACE & ETHNICITY

### Children in Households with a High Housing Cost Burden by Race and Ethnicity (2016)

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau, American Community Survey, 2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

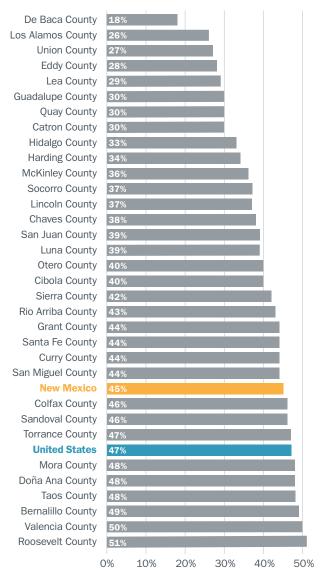

### **POLICY SOLUTIONS**

### To Address High Housing Cost Burdens:

- Increase funding for the Housing Trust Fund so more quality housing for low- and moderate-income families can be built, providing more children with stable, safe homes.
- · Save the Home Loan Protection Act from being repealed or weakened in order to protect more families from predatory lending practices that can lead to home foreclosure.
- Enact a rate cap of 36 percent APR (including fees) on all lending products so that families are not caught in cycles of increasing debt and can save for home purchases.
- Increase funding for the Low Income Home Energy Assistance Program (LIHEAP).
- Increase funding for Individual Development Accounts (IDAs), which can help parents save money for buying a home.

### RANKINGS

### Households Renting with High Housing Cost Burdens by County (2012-2016)

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B25070.

### **ECONOMIC WELL-BEING**

# **DISCONNECTED YOUTH**

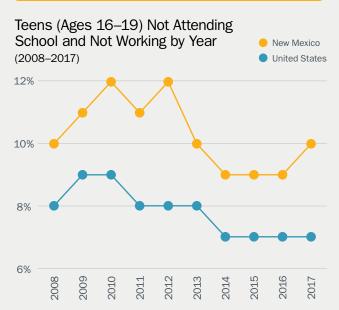

### **DEFINITION**

The percentage of teens (ages 16 to 19) who are neither in school nor working - often referred to as "disconnected youth."

### THE EXTENT OF THE PROBLEM

Ten percent of New Mexico's teens are considered disconnected. Youth who are low-income and/or youth of color are more likely to face the kinds of barriers that lead to being disconnected. Students of color are more often punished – and are punished more harshly - for exhibiting the same behaviors as white students. This leads to higher dropout rates. And youth of color are less likely to be interviewed and hired for jobs than are white youth. Disconnected teens are at risk for poor health and economic outcomes as adults, they have less access to a comprehensive health care (including mental health services), and are more likely to miss out on the social and emotional supports that can increase their chances of economic success and overall well-being.

### **TRENDS**

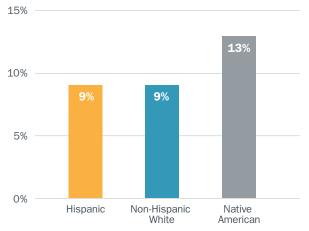

SOURCE: U.S. Census Bureau, American Community Surveys, 2008-2017, Table B14005.

The percentage of New Mexico teens in this situation got slightly worse from 2016 to 2017, rising from 9 percent to 10 percent. New Mexico now ranks 48th among the states in this indicator, down from 40th the previous year. From 2015 to 2016, rates improved among Hispanic and Native American teens but worsened for non-Hispanic white teens in New Mexico. Overall, our rate of teens not in school and not working has been relatively flat for a number of years among all teens, so hopefully this new increase does not indicate an upwards trend again.

### RACE & ETHNICITY

### Teens (Ages 16–19) Not Attending School and Not Working by Race and Ethnicity (2016)

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau American Community Survey, 2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

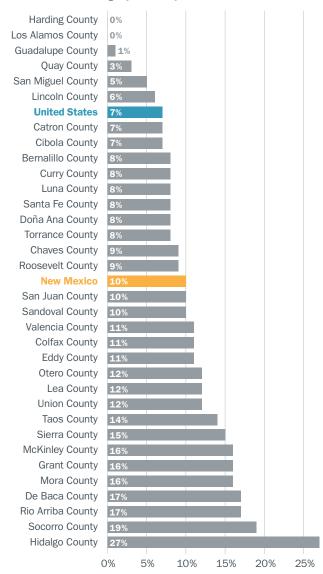

### **POLICY SOLUTIONS**

### To Engage Disconnected Youth:

- Enact initiatives to lower the cost of college for those students for whom tuition and other costs put college credentials out of their reach. These should include making the lottery scholarship need-based, restoring the College Affordability Fund, and lowering interest rates for student loans.
- Develop a state youth employment strategy using a career pathways approach - that includes business, nonprofits, government, school districts, and colleges - to help identify and provide support for disconnected youth, link funding to accountability and meaningful outcomes, and create incentives. Such a model should focus on workers whose skills do not match those needed for good-paying jobs to boost their employability and opportunities for knowledge acquisition through higher education.
- Revisit zero-tolerance policies and penalties in order to keep more students in school.
- Support high school dropout recovery programs.
- Provide support for vulnerable students (those experiencing homelessness, who are incarcerated, need special education, are English language learners, etc.) who are at risk for dropping out.

### RANKINGS

### Teens (Ages 16–19) Not Attending School and Not Working by County (2012–2016)

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B14005.

### **EDUCATION**

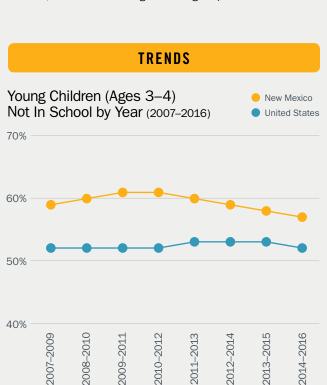

# YOUNG CHILDREN NOT IN SCHOOL

### DEFINITION

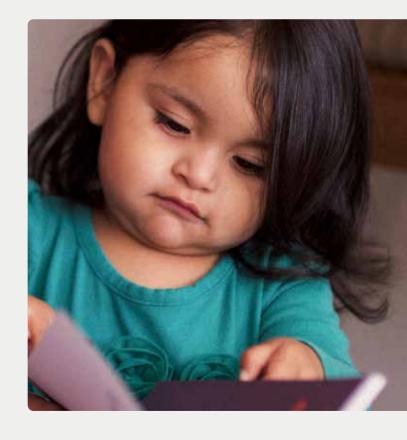

The percentage of young children (ages 3 and 4) who did not attend some form of care that included educational experiences (including nursery school, pre-school, pre-K, Head Start, and kindergarten).

### THE EXTENT OF THE PROBLEM

Children's chances of being healthy, doing well in school, and growing up to be productive and contributing members of society are tied to their experiences in the earliest years. Children learn more quickly during their early years, and the first five years of a child's life are particularly important because that is when 90 percent of the brain's neurological foundation is built. Research shows that safe, secure, nurturing, and non-stressful environments during the first five years are essential to the positive development and healthy growth that will set children up for success later in life. High-quality early childhood programs like home visiting, child care assistance for 4- or 5-STAR programs, and pre-K lead to improved child well-being and are linked to significant long-term improvements for children and savings for states. Yet, 57 percent of New Mexico's children ages three to four did not attend some form of preschool or school program in 2016, with rates even higher among Hispanic children.

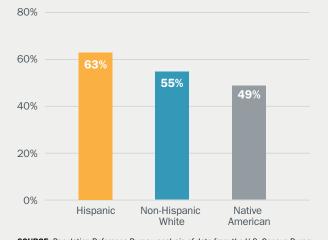

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau, American Community Survey, pooled estimates from 2007 to 2016.

### RACE & ETHNICITY

Young Children (Ages 3-4) Not In School by Race and Ethnicity (2012–2016)

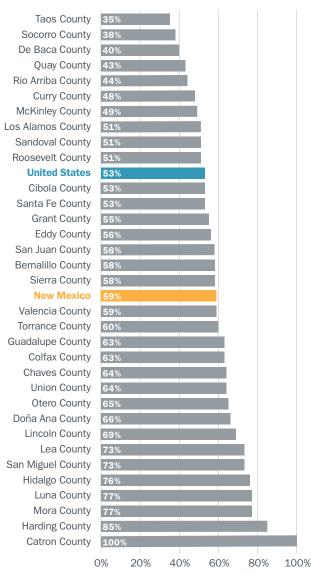

SOURCE: Population Reference Bureau analysis of data from the U.S. Census Bureau, American Community Survey, 2012-2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

Between 2015 and 2016, 2,000 more young children in New Mexico were enrolled in school than previously, and the percent of young children not in school improved slightly, dropping from 58 percent to 57 percent. We are now ranked 31st in the nation on this measure, an improvement from last year's 33rd ranking. However, New Mexico's rate of young children enrolled in preschool has not changed much over the long term, and is actually only slightly better than it was in 2009. Continuing the planned rollout of the NM Pre-K program would mean that more children are able to attend pre-school each year, but significant enrollment cuts in the child care assistance program mean fewer families are able to afford child care in a setting that is educationoriented. Research and public opinion clearly support the need for expanded early childhood programs, and while policymakers have made improvements and increases in some areas, these improvements are not sufficient to adequately address the great, pressing needs in this policy area.

### RANKINGS

### Young Children (Ages 3–4) Not In School by County (2012–2016)

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B14003.

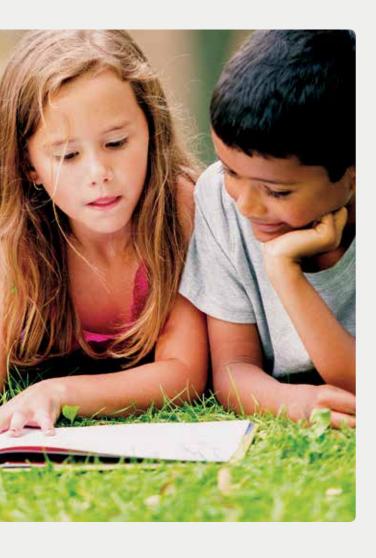

### POLICY SOLUTIONS

### To Increase Preschool Enrollment:

- · Increase funding for early care and learning services and pass a constitutional amendment to support these programs with a small percentage of the state's \$18 billion Land Grant Permanent School Fund.
- Increase funding for high-quality 3-and 4-year old pre-K so it is available to all and available as a full-day program.
- Increase eligibility levels for child care assistance to at least 200 percent of the federal poverty level (FPL) and provide continuous eligibility through 300 percent of the FPL so parents can accept pay raises without losing benefits; and scale co-pays for families receiving child care assistance to their incomes so that copays do not put an undue burden on low-income families.
- · Increase funding for high-quality home visiting so that all families who want services have access to them.
- · Increase funding for child care assistance to incentivize and adequately compensate for quality.
- · Increase training, technical assistance, compensation, and retention incentives for early learning providers.
- · Increase funding for the Family Infant Toddler (FIT) program, which helps families whose young children have special needs.

### **EDUCATION**

# **READING & MATH PROFICIENCY**

### **DEFINITION**

The percentage of fourth graders who scored below proficient in reading and the percentage of eighth graders who scored below proficient in math as measured and defined by the National Assessment of Educational Progress (NAEP). Note: These proficiencies are different from those reported on pages 46-48, which come from the Partnership for Assessment of Readiness for College and Careers (PARCC) tests.

### THE EXTENT OF THE PROBLEM

\_\_\_\_\_

Reading proficiency is a crucial element of scholastic success, but in New Mexico, 75 percent of our children are not proficient in reading by the fourth grade. Children need to be able to read proficiently by fourth grade in order to be able to use their reading skills to learn other school subjects. Children having trouble with reading proficiency will fall further and further behind as reading-based curricula move increasingly out of their reach. In fact, kids who are not reading at grade level by this critical point are more likely to drop out of school and less likely to go to college. As has been the case in the past, boys, children of color, and low-income children have proficiency rates that are below the state average in fourth grade reading.

The 80 percent of New Mexico eighth graders who are behind in math also face risks: they lack the required skills to do well in high school and college math courses. As more and more jobs in today's increasingly high-tech work environment depend on science, technology, engineering, and math (STEM) skills, students not proficient in math are at a real disadvantage. Girls, children of color, and low-income children are even more at risk of falling behind because they have lower proficiency rates than the state average on this indicator.

### **POLICY SOLUTIONS**

### To Improve Reading and Math Proficiency Levels:

- Expand high-quality early childhood care and learning services to help prepare children for school and increase the likelihood they will reach grade-level benchmarks on time.
- Increase K-12 per-pupil funding to help schools decrease over-crowding in classrooms, provide resources for learning needs, and mitigate the problems associated with poverty.
- Expand funding for K-3 Plus so more low-income students have the additional quality instructional time they need to bring them up to grade level.
- Expand K-3 Plus to a K-8 Plus program because children in lowincome families still need extra supports beyond third grade.
- Reduce class sizes for children in high-poverty areas.

- Expand quality before- and after-school, mentorship, and tutoring programs to provide added academic assistance to low-income and low-performing students, or those whose parents may not be able to help them with their homework.
- Increase the availability of reading coaches and support evidence-based reading initiatives.
- Provide math coaches and professional development for math teachers.
- Raise compensation for teachers, principals, and student support staff.
- Revisit zero-tolerance policies and penalties in order to keep more students in school.
- Increase the at-risk factor in New Mexico's state equalization guarantee education funding formula.

New Mexico ranks 50th once again in reading proficiency and dropped from 47th to 49th in math proficiency among the states. And though the state still performs slightly worse in the percentage of fourth graders who score below proficient on reading than it did in 2007, this indicator has continued to improve since 2009. Rates among Hispanic students in New Mexico improved the most - by three percentage points - from 2015 to 2017. When it comes to eighth grade math proficiency, the percentage of students who are proficient continues to worsen since reaching 76 percent in 2011, but has slightly improved over the long-term, with Hispanic and Native American students showing the most improvement from 2007 to 2017.

NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points, "Low-income" students in this measure are those who are eligible for free or reduced-price school lunches.

### **EDUCATION**

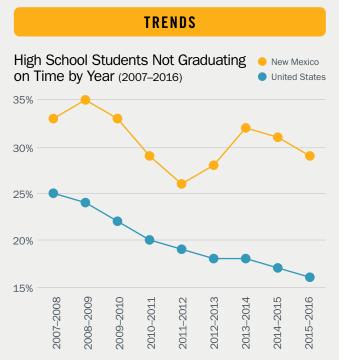

# **HIGH SCHOOL GRADUATION**

### **DEFINITION**

High school students not graduating on time refers to the percentage of a freshmen class not graduating in four years' time. This is not the same as the dropout rate.

### THE EXTENT OF THE PROBLEM

Twenty-nine percent of New Mexican high-schoolers do not graduate on time. This rate is significantly worse than the national average of 16 percent. Graduation rates are best among Asian American high-schoolers in New Mexico, but worst among Native Americans, students from low-income homes, and students with disabilities. New Mexico is ranked 50th once again among the states on this indicator, which is concerning because students who don't graduate on time are more likely to drop out altogether, less likely to go on to college, and more likely to be unemployed or employed in low-paying jobs.

**SOURCE:** Population Reference Bureau analysis of data from the U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD).

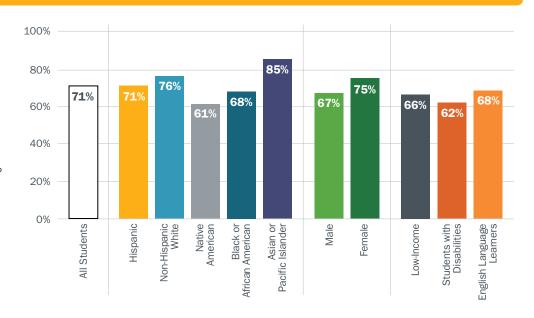

Following a nationwide trend, the percentage of New Mexico students not graduating on time improved slightly from the school year ending in 2015 to the one ending in 2016. Though New Mexico continues to rank very poorly among the states on this measure, the state has made improvements in this indicator over the long term, going from 33 percent of students not graduating on time in 2008 to 29 percent not graduating on time in 2016. The biggest improvements in this indicator over that time period were seen among Native American and Hispanic students.

### RACE & ETHNICITY

High School **Graduation Rates** by Race, Ethnicity, and Other Factors (2017)

SOURCE: NM Public Education Department, 4-Year Cohort Graduation Rates, 2017. **NOTE:** "Low-income" students in this measure are those who are eligible for free or reduced-price school lunches.

### **POLICY SOLUTIONS**

### To Improve On-Time Graduation Rates:

- · Provide more school counselors.
- · Identify students in ninth grade who require additional learning time and provide free summer school, after-school, and online learning opportunities.
- Provide relevant learning opportunities through service learning and dual credit parity to better prepare students for career or college.
- · Provide professional development for teachers on the use of technology.
- Support dropout recovery programs.
- · Provide support for vulnerable students (those experiencing homelessness, who are incarcerated, need special education, are English language learners, etc.) who are at risk for dropping out.

- Increase funding for evidence-based teen pregnancy prevention programs.
- Ensure support for community schools, which provide students with services shown to increase academic performance – school-based health centers, quality before- and after-school programming, service learning, and classes for parents.
- Reduce class sizes for students in high-poverty areas.
- Raise compensation for teachers, principals, and other student support staff.
- Revisit zero-tolerance policies and penalties in order to keep more students in school.
- Increase the at-risk factor in New Mexico's state equalization guarantee education funding formula.

### **HEALTH**

# **LOW-BIRTHWEIGHT BABIES**

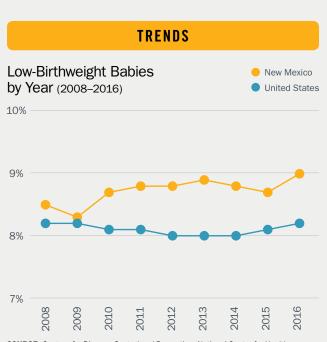

### **DEFINITION**

The percentage of babies born weighing 5.5 pounds or less.

### THE EXTENT OF THE PROBLEM

In 2016, 9 percent of New Mexico babies were born at a low birthweight, ranking us 40th in the nation on this indicator. Rates of low-birthweight babies in New Mexico are highest among African Americans (16.7 percent) and Asian or Pacific Islanders (12.7 percent). Babies born at a low birthweight are at greater risk for developmental delays, disabilities, chronic conditions, and early death. The risk factors for having a low-birthweight baby include: living in poverty; giving birth at a young age; using drugs and alcohol during pregnancy; receiving late or no prenatal care; and/or not having enough to eat during pregnancy.

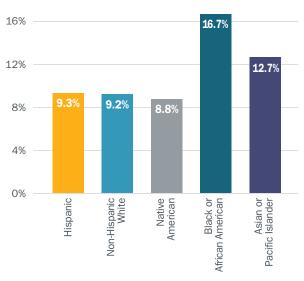

SOURCE: Centers for Disease Control and Prevention, National Center for Health Statistics (NCHS), National Vital Statistics Reports, 2008-2016.

New Mexico's rate of low-birthweight babies in 2016 has increased to its highest point since 2008. This worsening trend is mirrored nationally as well, despite improved access to health insurance via the Affordable Care Act. Rates in New Mexico have worsened for African Americans, Asian or Pacific Islanders, Native Americans, and non-Hispanic whites.

### RACE & ETHNICITY

### Low-Birthweight Babies by Race and Ethnicity (2017)

SOURCE: New Mexico Department of Health, Indicator-Based Information System for Public Health (IBIS). Retrieved October, 2018 from http://ibis.health.state.nm.us.

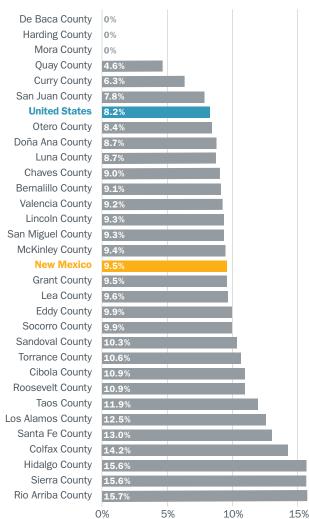

### **POLICY SOLUTIONS**

### To Decrease the Rate of Low-Birthweight Babies:

- Expand outreach to pregnant women to enroll them in Medicaid early in their pregnancy so more prospective mothers get full-term pre-natal care that can help prevent low birthweight.
- Provide adequate funding for more programs for new parents, including home visiting programs that begin prenatally, so more women can be served during their pregnancy.
- · Expand and fully fund health and nutrition programs for pregnant teens.
- Support the creation of and funding for more county and tribal health councils.
- Fund home visiting services under a Medicaid waiver to draw down federal funding.
- Automatically exempt single-parent pregnant women from TANF (Temporary Assistance for Needy Families) work requirements, especially in the last trimester.
- Protect SNAP (Supplemental Nutrition Assistance Program) from eligibility changes that would decrease the number of pregnant mothers receiving these benefits.

### RANKINGS

### Low-Birthweight Babies by County (2017)

SOURCE: New Mexico Department of Health, Indicator-Based Information System for Public Health (IBIS). Retrieved October, 2018 from http://ibis.health.state.nm.us. NOTE: The count or rate for some counties for certain indicators are suppressed by the NM Dept. of Health because the observed number of events is very small and not appropriate for publication. For survey queries, percentages calculated from fewer than 50 survey responses are suppressed. For this measure, low-birthweight rates for Catron, Guadalupe, and Union counties are suppressed.

### HEALTH

# **CHILDREN WITHOUT HEALTH INSURANCE**

### **DEFINITION**

The percentage of children (ages 0 to 18) who do not have health insurance coverage, including Medicaid.

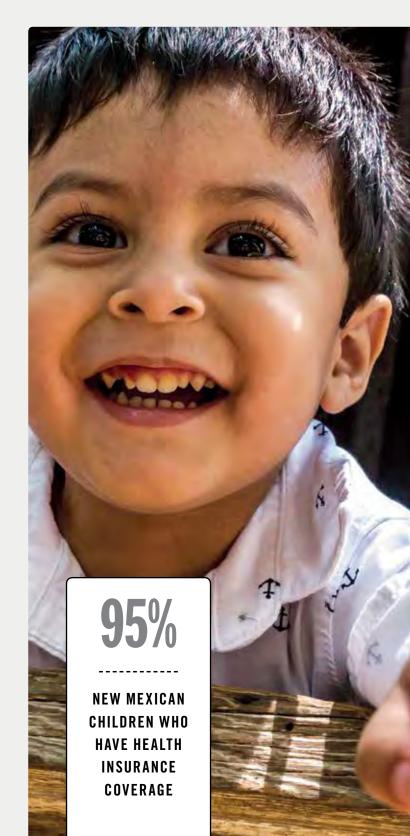

### THE EXTENT OF THE PROBLEM

New Mexico children face some major challenges, but ensuring that they have health insurance and access to preventive care options can help address a number of these other issues that can threaten children's health and well-being. The 5 percent of New Mexico children without health insurance are less likely to get well-baby and well-child visits, less likely to receive immunizations, and more likely to deal with untreated developmental delays and chronic conditions that can hinder healthy growth and learning. Native American children in New Mexico, with uninsured rates around 13 percent, are at the greatest risk of being uninsured.

### **TRENDS** Children without Health Insurance New Mexico by Year (2008–2017) United States 16% 12% 8% 4% 0%

SOURCE: U.S. Census Bureau, American Community Surveys from 2008 to 2017,

Table C27001. **NOTE:** Data for 2008-2016 are for children ages 0 to 17, while data for

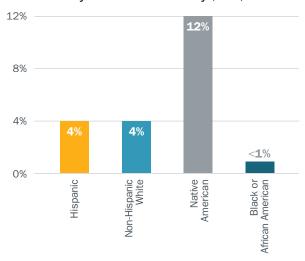

2017 are for children ages 0 to 18.

The percentage of children without health insurance - at 5 percent - remained unchanged from 2016 to 2017. However, from 2008 to 2017, the percentage improved from 14 percent to 5 percent, which helps with our current ranking of 27th nationwide in this indicator. Thanks to the expansion of Medicaid under the Affordable Care Act, New Mexico has seen some of the biggest improvements over time in the nation in the percentage of the child population without health insurance. Notably, the biggest improvements over time in this measure have been among Native American and Hispanic children.

### RACE & ETHNICITY

### Children (Ages 0–18) without Health Insurance by Race and Ethnicity (2017)

SOURCE: U.S. Census Bureau, 2017 American Community Survey, Table C27001. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

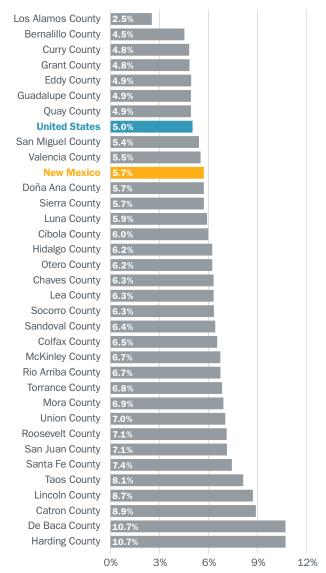

### **POLICY SOLUTIONS**

### To Lower the Rate of Children without Health Insurance:

- Implement aggressive outreach and enrollment programs for Medicaid for eligible children to help cover those children who are still not enrolled.
- Integrate the health insurance marketplace with Medicaid so there is "no wrong door" for enrollment to help low-income parents, who are getting coverage for themselves, enroll their Medicaid-eligible children at the same time.
- Simplify the Medicaid enrollment and recertification process for children, and enact express-lane enrollment, which would help the state identify eligible children using information from other programs like Head Start and SNAP (food stamps).
- · Support the adoption of a Basic Health Plan or Medicaid Buyin Plan that would greatly improve access to affordable health care for all New Mexicans.
- Support the practice of dental therapy to improve access to dental care for more children, particularly those in rural areas in New Mexico.

### RANKINGS

### Children (Ages 0-18) without Health Insurance by County (2016)

SOURCE: U.S. Census Bureau, Small Area Health Insurance Estimates, 2016.

#### HEALTH

# **CHILD & TEEN DEATH RATES**

### DEFINITION

The number of deaths of children (ages 1-14) and teens (ages 15-19) for every 100,000 children and teens in that age range in the population. See page 55 for infant (ages 0-1) mortality rates.

### THE EXTENT OF THE PROBLEM

New Mexico's child and teen death rate is 33 deaths per 100,000 children and teens. This is significantly worse than the U.S. average rate of 26 per 100,000, and ranks New Mexico 39th among the states on this measure. Rates among Native American children in New Mexico (at 44 per 100,000) are significantly higher than the state and national averages on this indicator. Most youth deaths are preventable and caused by accidents, homicide, or suicide. Ensuring that New Mexico children and teens live in safe, supportive homes and communities, have access to safe public spaces and to a full range of physical and mental health care services, and do not have unauthorized access to firearms, can help improve rates in this area.

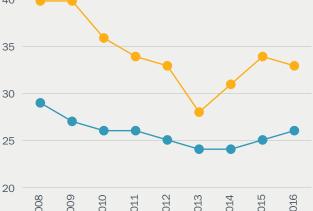

### **POLICY SOLUTIONS**

### To Lower Child and Teen Death Rates:

- Support and expand quality home visiting services proven to lower child abuse and neglect rates in order to help improve social and physical outcomes for infants and young children.
- Expand funding for suicide prevention programs to provide youth with supportive adults, strategies to cope with difficult situations, and a sense of hope.
- · Enact stronger gun safety laws to limit unauthorized child access to guns in order to lower the number of accidental gun deaths.
- Adequately fund evidence-based child abuse prevention programs and strengthen the role of prevention at the Children, Youth and Families Department (CYFD).
- Increase funding for child protective services in order to increase staff and reduce caseloads.
- · Create a citizen oversight or review board for all CYFD child abuse cases that result in death.

#### **HEALTH**

# TEEN ALCOHOL & DRUG ABUSE

### **DEFINITION**

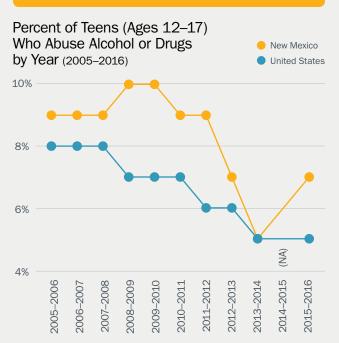

For boys (ages 12-17), binge drinking is defined as having five or more drinks on at least one occasion in the last 30 days; for girls (ages 12-17), binge drinking is defined as having four or more drinks on at least one occasion in the last 30 days.

# 11% **NEW MEXICAN TEENS WHO ENGAGED** IN BINGE DRINKING

### THE EXTENT OF THE PROBLEM

Approximately 12,000, or 7 percent, of New Mexico teens ages 12 to 17 abused drugs or alcohol from 2015 to 2016. This is an increase of 3,000 teens since 2013-2014, the previous time frame available for this data. During that time period, the rates of most other states improved while the rates for New Mexico worsened. Our state is now ranked 48th in the nation in this indicator. Within New Mexico, Hispanic and non-Hispanic white teens are most likely to have engaged in binge drinking. Teen alcohol and drug abuse is associated with increased risks in a number of other areas. Teens who abuse alcohol or drugs are more likely to be convicted of a crime, drive under the influence, do poorly in school, drop out of school, or become teen parents. Alcohol and drug abuse can also lead to mental and physical health problems, the effects of which may carry over into adulthood.

### **TRENDS**

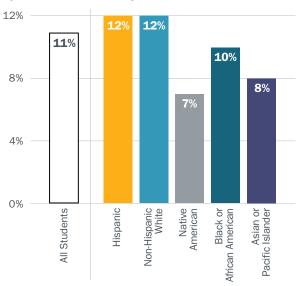

**SOURCE:** National Survey on Drug Use and Health 2005-06 to 2015-2016, Substance Abuse and Mental Health Services Administration.

While the number of teens abusing alcohol or drugs has recently worsened, the overall trend has improved slightly over time, from 10 percent in 2008-2009 to 7 percent in 2015-2016. This means that 5,000 fewer New Mexico teens are abusing alcohol and drugs than were in 2008-2009. The percent of teens who engaged in binge drinking did decrease in the most recent measure, falling from 15 percent in 2015 to 11 percent in 2017. The biggest improvements in this indicator were among African American teens, 18 percent of whom reported binge drinking in 2015, versus 10 percent reporting the same in 2017.

### RACE & ETHNICITY

### Teens (Ages 12–17) Binge Drinking by Race and Ethnicity (2017)

SOURCE: New Mexico Youth Risk and Resiliency Survey (YRRS), 2017.

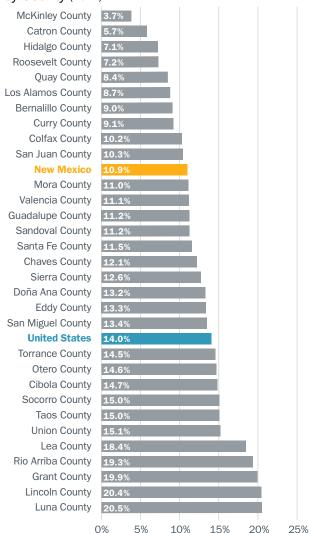

### **POLICY SOLUTIONS**

### To Reduce Teen Alcohol and Drug Abuse:

- · Expand behavioral health programs for children, youth and families.
- Expand funding and support for school-based health centers so students have access to physical and behavioral health services they might not otherwise get, including confidential and developmentally appropriate behavioral health services in a safe, accessible place.
- · Support the creation of and funding for more county and tribal health councils in order to better reach young people who are attempting to self-medicate an untreated mental health problem with alcohol and drugs.
- Fund drug and alcohol rehabilitation services for youth, especially at an early intervention stage - as opposed to incarcerating youth for alcohol-related offenses - to help prevent further problems and reduce high rates of recidivism.
- Support treatment instead of incarceration for nonviolent drug and alcohol offenses.
- Decriminalize some nonviolent offenses for drug possession.

### RANKINGS

### Teens (Ages 12–17) Binge Drinking by County (2017)

SOURCE: New Mexico Youth Risk and Resiliency Survey (YRRS), 2017. NOTE: De Baca and Harding counties are not listed because no data were available. Prior to 2016, the definition of binge drinking was the same for both boys and girls (ages 12-17).

### **FAMILY & COMMUNITY**

# CHILDREN IN **SINGLE-PARENT FAMILIES**

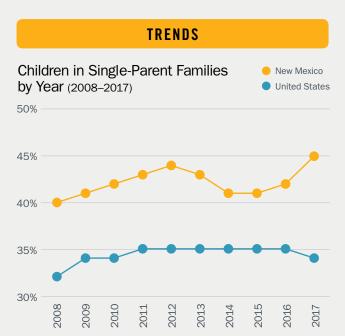

### DEFINITION

The percentage of children living with an unmarried parent. Note, parents who are cohabitating but remain unmarried are counted as 'single parents.'

### \_\_\_\_\_ THE EXTENT OF THE PROBLEM

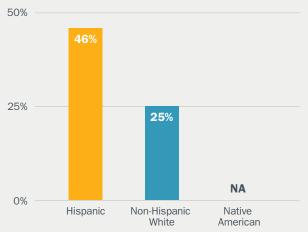

Forty-five percent of New Mexico children live with a parent or parents who are unmarried. New Mexico's rate is much higher than the national average of 34 percent, and we are once again ranked 48th among the states on this measure. Families in which only one parent is present tend to have lower incomes and less access to employer-sponsored benefits like health insurance and paid sick days than do two-parent households. Single parents may have to work two jobs or overtime hours just to provide basic necessities for their families, and may have trouble affording enriching experiences for their children like high-quality child care, which costs more than attending college in New Mexico. Single mothers may have the added disadvantage of earning less than their male counterparts in similar occupations. Although children can be better off without a problem parent in the household, children in single-parent families often have less access to emotional supports and economic resources than do children in two-parent families. Children of color are often more likely to live in single-parent households than are their non-Hispanic white peers, with 46 percent of the state's Hispanic children in New Mexico living in single-parent families, compared to 25 percent of non-Hispanic white children.

SOURCE: U.S. Census Bureau, American Community Survey, 2008 through 2017, Table C23008

### RACE & ETHNICITY

### Children in Single-Parent Families by Race and Ethnicity (2016)

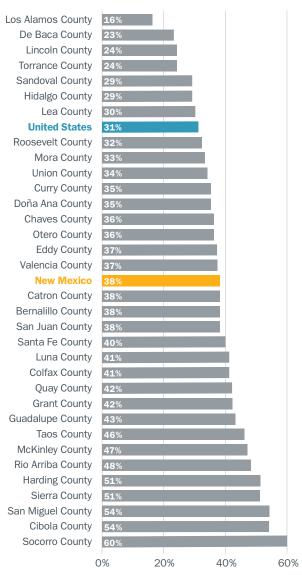

**SOURCE:** Population Reference Bureau analysis of U.S. Census Bureau, American Community Survey Supplementary Survey data from 2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

The rate of children living in single-parent families worsened from 42 percent in 2016 to 45 percent in 2017, and the overall rate is still higher than the 40 percent rate that New Mexico saw in 2008. This long-term worsening of the rate of New Mexico children living in single-parent families no longer mirrors the national trend, which has been stagnant for the past few years and has now nearly dropped back to the 2008 national rate of 32 percent. Our high rate of children living in single-parent families is particularly problematic in New Mexico because so many of our children already live in poverty, are food insecure, and face many educational and health challenges. Two-generational approaches, which create opportunities simultaneously for both parents and children - and in doing so address both groups' needs - are crucial for improving indicators like children in single-parent families.

### RANKINGS

### Children in Single-Parent Families by County (2012–2016)

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B09002.

### **POLICY SOLUTIONS**

### To Support Children in Single-Parent Families:

- Expand funding for home visiting programs, especially for teen parents. Home visiting provides parents with early emotional support, parenting skills, developmentally appropriate activities, and aid in accessing community economic, health, and educational resources.
- Increase eligibility levels for child care assistance to at least 200 percent of the federal poverty level (FPL) and provide continuous eligibility through 300 percent of the FPL in order to reduce the impact of the "cliff effect"; and scale co-pays for families receiving child care assistance to their incomes so that copays do not put an undue burden on low-income families. As most single parents work, child care for them is a necessity.
- Expand funding for mentorship and other pregnancy prevention programs for teens. Mentorship programs can help young women delay child bearing until they are older by fostering self-confidence and helping them work toward a future career.
- Support career pathways approaches that better align adult education with post-secondary education opportunities and industry needs while providing a clearer ladder to economic self-sufficiency.
- · Maintain current Medicaid eligibility for family planning services.

**FAMILY & COMMUNITY** 

# PARENTS WITHOUT A HIGH SCHOOL DIPLOMA

20%

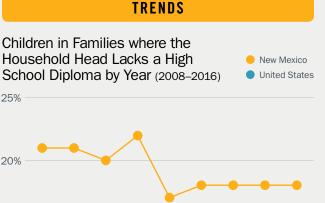

15%

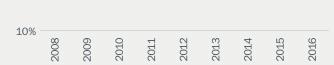

### DEFINITION

The percentage of children (ages 0-17) who live in families where the head of household lacked a high school diploma.

### THE EXTENT OF THE PROBLEM

In 2016, 18 percent of New Mexico children - or 88,000 New Mexico kids - lived in families where the head of the household lacked a high school diploma. These numbers rank New Mexico 47th in the nation on this indicator. Rates are high among children of color, with 24 percent of the state's Hispanic children and 17 percent of Native American children living in families in which the household head lacked a diploma - compared with 4 percent of non-Hispanic white children. Parents with higher levels of education are more likely to be employed, to have higher incomes, to have access to a full range of employer health and leave benefits (that also benefit their families), and to be able to afford high-quality child care and other enriching opportunities for their children. Research shows that because of these and other factors, the education level of a parent especially the education level of a mother – is a strong predictor of how far a child will go in school. Two-generational approaches, which create opportunities simultaneously for both parents and children - and in doing so address both groups' needs are crucial for improving this indicator.

SOURCE: Population Reference Bureau analysis of U.S. Census Bureau, American Community Survey, 2008-2016

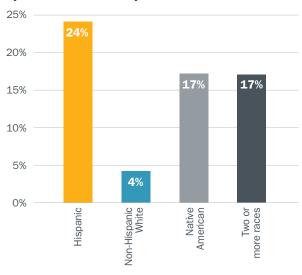

Though New Mexico has seen no real gains in this indicator over the past few years, the rate of children whose parents lack a high school diploma has been improving in New Mexico and nationwide since 2008. In fact, from 2008 to 2016, the rate of children living in families headed by a parent without a high school diploma improved from 21 percent to 18 percent. In New Mexico, the biggest improvements in this indicator since 2008 have been among Hispanic and Native American children.

#### RACE & ETHNICITY

### Children in Families where the Household Head Lacks a High School Diploma by Race and Ethnicity (2016)

SOURCE: Population Reference Bureau analysis of U.S. Census Bureau, American Community Survey, 2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

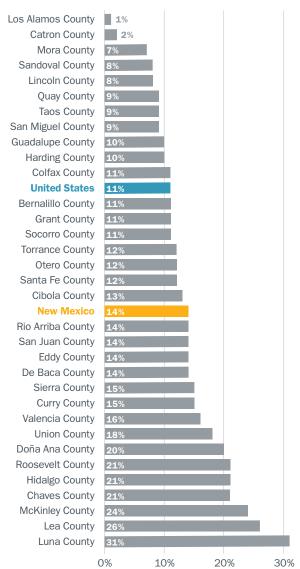

### **POLICY SOLUTIONS**

### To Increase the Number of Parents Earning a High School Diploma:

- · Expand access to high school equivalency programs, adult basic education, post-secondary education, and job training through a career pathways approach.
- Provide need-based financial assistance for low-income and low-skilled adults seeking entry into the programs listed above. Need-based financial aid is vital for returning students because they do not qualify for the lottery scholarship and may have a family to support while they advance their education.
- · Expand funding and access for English as a second language (ESL) classes to help parents increase their level of education. Children whose parents do not speak English fluently can be at a disadvantage when seeking assistance with their schoolwork and getting their parent to advocate on their behalf.

#### RANKINGS

### Families where the Household Head Lacks a High School Diploma by County (2012-2016)

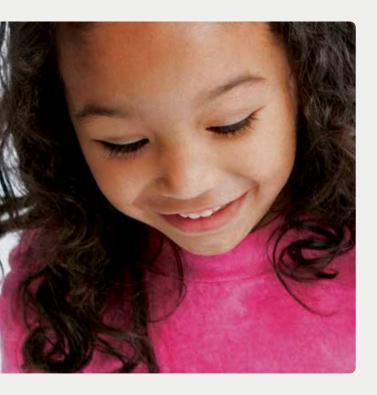

SOURCE: U.S. Census Bureau, American Community Survey, 2012-2016, Table B17018.

### **TRENDS & RANKINGS**

#### **FAMILY & COMMUNITY**

### **HIGH-POVERTY AREAS**

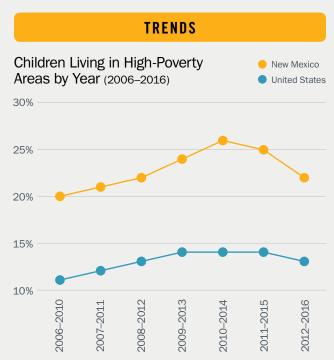

### **DEFINITION**

The percentage of children living in areas (Census tracts) where at least 30 percent of the population lives at or below the federal poverty level.

### THE EXTENT OF THE PROBLEM

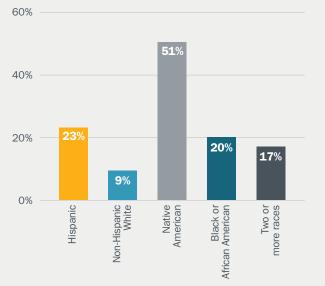

Twenty-two percent of New Mexico children live in high-poverty areas. New Mexico's rate is much higher than the national average of 13 percent, and ranks our state 48th in the nation on this indicator. Regardless of their own family's income, children who grow up in neighborhoods where poverty rates are high are more likely to be exposed to drugs and be victims of violent crime. They are less likely to have access to fresh and healthy food, adequate high-quality housing, and community resources like great schools and safe places to play. Studies show that children in high-poverty areas are more likely to start school behind and will need more individual attention. All of these factors can negatively impact their health and development. Native American children in New Mexico are most likely to live in high-poverty areas (at 51 percent), followed by Hispanic children (at 23 percent). Non-Hispanic white children in New Mexico are least likely to live in high-poverty areas (9 percent).

SOURCE: U.S. Census Bureau, American Community Surveys 5-year summary files released from 2006 to 2016.

#### RACE & ETHNICITY

Children Living in High-Poverty Areas by Race and Ethnicity (2012–2016)

SOURCE: Population Reference Bureau analysis of U.S. Census Bureau, American Community Survey, 2012-2016. NOTE: Estimates for other races and ethnicities suppressed because the confidence interval around the percentage is greater than or equal to 10 percentage points.

Reflecting a nationwide trend, New Mexico saw an improvement from 2015 to 2016 in the percentage of children living in high-poverty areas, decreasing from 25 to 22 percent, a difference of approximately 16,000 fewer children. However, longer-term trends are not as encouraging, with 12,000 more New Mexico children living in high-poverty areas in 2016 than did in 2010. Rates increased among Native American and Hispanic children in New Mexico over this time span.

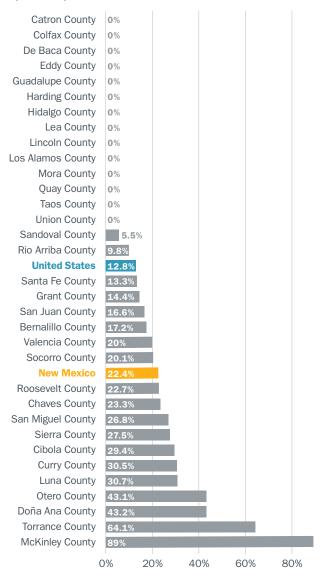

#### POLICY SOLUTIONS

### To Address High-Poverty Areas:

- · Increase access to affordable housing in safe areas with prospects of work for low-income families, especially families of color. One way to do this is to create or expand incentives for developers to build mixed-income housing developments.
- · Promote community change efforts that integrate physical revitalization with human capital development. Combining investment in early childhood and education programs for children with workforce development and asset-building activities for parents can benefit lower-income families.
- Increase funding for Individual Development Accounts (IDAs), which help parents and children save money for buying a home or paying for college. Children in families who own a home do better in school, and families feel more invested in their neighborhoods.
- · When possible, target additional school funding towards schools in high-poverty areas.
- Reduce class sizes for children in high-poverty areas.
- Enact targeted economic development initiatives to communities that need them most and require accountability for tax breaks to corporations so that tax benefits are only received if corporations create quality jobs with decent wages and benefits for New Mexico residents. Tax breaks that do not create jobs should be repealed so the state can invest more money in support services for our children.
- Target WIOA (Workforce Innovation and Opportunity Act) and TANF (Temporary Assistance for Needy Families) funds to support education and job training programs that help parents increase their educational attainment and workforce skills that create pathways out of poverty.

### RANKINGS

### Children Living in High-Poverty Areas by County (2012-2016)

#### **FAMILY & COMMUNITY**

### TEEN BIRTH RATE

### **DEFINITION**

The number of births to teens (ages 15-19) for every 1,000 females in that age range in the population.

### -----THE EXTENT OF THE PROBLEM

In New Mexico the teen birth rate was 30 per 1,000 female teens in 2016 - higher than the U.S. average of 20, ranking New Mexico 44th among the states on this measure. Teen births are associated with negative impacts for both mothers and children. Teen mothers are less likely to graduate high school, to receive adequate prenatal care, and to be economically secure. Babies born to teen mothers are more likely to be born at a low birthweight, be malnourished, face developmental delays, do poorly in school, become teen parents themselves, and live in poverty. Far from being an isolated issue, teen births affect the well-being of mothers, children, and society as a whole. Teen birth rates are lower among New Mexico's non-Hispanic white and African American populations.

### **POLICY SOLUTIONS**

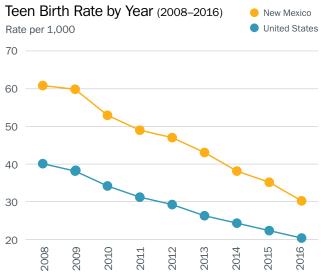

#### To Lower the Teen Birth Rate:

- Increase funding for teen pregnancy prevention and support programs to help at-risk young women avoid pregnancy, and see alternative opportunities for their future. Parenting support programs such as home visiting also help young mothers delay second pregnancies, improve their parenting, get a high school diploma, and access community supports.
- Expand funding and support for school-based health centers. Students reaching sexual maturity need access to health professionals to help them make informed decisions.
- Expand evidence-based, age-appropriate sex education to help youth avoid pregnancy; and defund abstinence-only programs.
- Fund service learning programs that provide students with civic engagement and work-related experience and have been linked to decreases in teen pregnancy rates.
- Support the creation and funding for county and tribal health councils in order to better integrate health care with social, emotional, behavioral, and cognitive development for teens.

Following a national trend, the teen birth rate in New Mexico has improved significantly over time, dropping from 61 per 1,000 female teens in 2008 to 30 per 1,000 in 2016. This represents an improvement of 51 percent, and it moved New Mexico from 49th to 44th among the states on this indicator. Teen birth rates have improved across all races and ethnicities, but have improved most dramatically among Hispanics and Native Americans in New Mexico, with the rate of Hispanic teen births dropping from 85 per 1,000 in 2008 to 32 per 1,000 in 2016, and the rate of Native American teen births dropping from 72 per 1,000 in 2008 to 34 per 1,000 in 2016.

### RACE & ETHNICITY

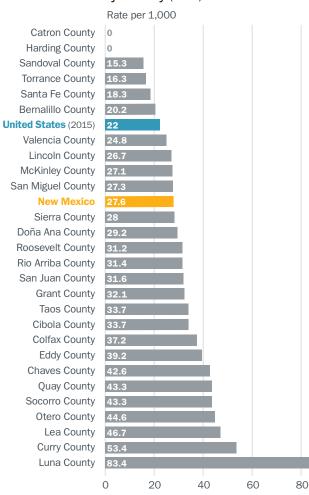

### Teen Birth Rate by Race and Ethnicity (2017)

SOURCE: New Mexico Department of Health, Indicator-Based Information System for Public Health (IBIS). Retrieved October, 2018 from http://ibis.health.state.nm.us. NOTE: Data for other races and ethnicities suppressed due to small numbers of cases.

#### RANKINGS

### Teen Birth Rate by County (2017)

SOURCE: New Mexico Department of Health, Indicator-Based Information System for Public Health (IBIS). Retrieved October, 2018 from http://ibis.health.state.nm.us. NOTE: The rate for certain counties is suppressed by the NM Dept. of Health because the observed number of events is very small and not appropriate for publication. For survey queries, rates calculated from fewer than 50 survey responses are suppressed. For this measure, teen birth rates for De Baca, Guadalupe, Hidalgo, Los Alamos, Mora, and Union counties are suppressed.

# FOOD INSECURITY

### Households Receiving SNAP Assistance by County (2012-2016)

The percentage of households receiving Supplemental Nutrition Assistance Program (SNAP) benefits is a key indicator of food insecurity, and New Mexico's high SNAP recipient percentages reflect our state's major challenges around food insecurity. New Mexico has a higher hunger rate, food insecurity rate, and SNAP recipiency rate than the national average. SNAP rates are highest among Native Americans.

### **TABLES & GRAPHS**

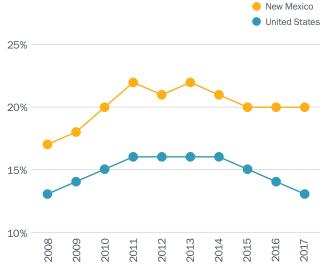

### **ECONOMIC WELL-BEING**

# **INCOME & POVERTY**

### Population (All Ages) Living in Poverty by Year (2008-2017)

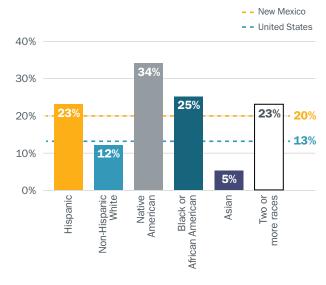

One in five New Mexicans live at or below the federal poverty level. That's just \$24,600 for a family of four in 2017. New Mexico is tied with Louisiana for the next-to-worst poverty rate in the nation. This rate has continued to climb since 2008 and is much higher than the national average.

SOURCE: U.S. Census Bureau, American Community Survey from 2008 to 2017, Table S1701.

### Population (All Ages) Living in Poverty by Race and Ethnicity (2017)

The rates of poverty among most populations of color – such as Hispanics, Native Americans, and African Americans - are considerably higher than poverty rates for non-Hispanic whites.

SOURCE: U.S. Census Bureau, American Community Survey, 2017, Table S1701.

### Median Household Income and Percent of Population (All Ages) Living in Poverty by County (2012–2016)

The overall median household income in New Mexico is about 17 percent lower than the national average. However, median household income fluctuates widely by county, with five counties - Eddy, Guadalupe, Harding, Sandoval and, most notably, Los Alamos - having lower poverty rates than the national average. These differences are related in large part to the kinds of industries and employers there. While median incomes rose from 2016 to 2017 in the U.S., it actually decreased slightly in New Mexico. New Mexico's poverty rate continues to remain much higher than the national average.

### Median Household Income and Percent of Population Living in Poverty by Tribal Area (2012 - 2016)

Tribal areas in New Mexico generally fare worse in traditional measures of economic well-being than does the state as a whole. Median household income in all but seven of the 22 tribal areas is lower than the state average (\$45,674), and all tribal areas have lower median incomes than the U.S. average (\$55,322). The tribal areas with median incomes that are higher than the state average generally have lower poverty rates, though not in the cases of the Jemez and San Felipe Pueblos.

### **ENROLLMENT**

Total Enrollment (2017-2018) and Percentage of Students Eligible for Free or Reduced-Price Meals (2016-2017) by Public School District

Students qualify for free meals if their families live at or below 130 percent of the federal poverty level (\$27,014 for a family of three in the 2017-2018 school year) and reduced-price meals if their families live at or below 185 percent of the federal poverty level (\$38,443 for a family of three). Children in these families are considered low-income, and they make up a large portion of the students in New Mexico. In fact, New Mexico has the third highest rate (63 percent) in the nation of public school students who qualify for free or reduced-price lunches.

#### **EDUCATION**

# **READING & MATH PROFICIENCY**

Students Meeting or Exceeding Expectations in English Language Arts and Mathematics Assessments by Grade and Public School District (2017-2018)

Twenty-nine percent of New Mexico fourth graders met or exceeded expectations in English Language Arts in the 2017-2018 school year, and about 13 percent of New Mexico eighth graders met or exceeded expectations in math. The results published here are the fourth year of results from New Mexico's Partnership for Assessment of Readiness for College and Careers (PARCC) assessment and cannot be compared to results from the previous tests (including SBA, etc.) used by PED to measure proficiencies. The PARCC tests were developed in an attempt to measure the full extent to which students are demonstrating mastery of the New Mexico Common Core State Standards (NMCCSS) and were first implemented in the 2014-2015 school year.

SOURCE: New Mexico Public Education Department, "Habitual Truant Students by District and School Type, 2017-2018" and "2016-2017 Dropout Final Rates," custom data request received November, 2018. NOTE: According to the NM PED, "habitually truant" means a student who has accumulated the equivalent of ten or more unexcused absences within a school year. The term "dropout" refers to a student that was enrolled during the previous school year, but is not enrolled at the beginning of the current school year, and does not meet any exclusionary conditions. Dropout rates are not related to cohort on-time graduation rates; and dropout rates and non-graduate rates are not equivalent and do not represent the same measure. In other words, if you subtract the rate of non-graduates from those who graduate on time, you do not get the same rate as the dropout rate. In addition, unlike on-time graduation rates, dropout rates are calculated each year.

### TABLES & GRAPHS

### **EDUCATION**

### **GRADUATION RATES**

### High School Graduation Rates by Selected Status and Public School District (2016–2017)

Seventy one percent of New Mexico high school students graduate in four years, with graduation rates lower among economically disadvantaged students (those who qualify for free or reduced-priced meals) and English language learners. When comparing the school year ending in 2016 with the one ending in 2017, the overall graduation rate remained the same, the rate for economically disadvantaged students worsened by one percentage point, and the rate for English language learners improved by one percentage point.

### TABLES & GRAPHS

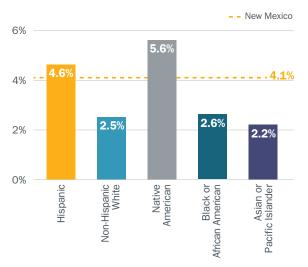

#### HEALTH

### PRENATAL CARE

Hispanic and African American women in New Mexico are the least likely to receive prenatal care during pregnancy. Non-Hispanic white mothers in New Mexico are the most likely to receive prenatal care early on in pregnancy. Babies born to mothers who do not receive prenatal care or to those who receive prenatal care only late in pregnancy are more likely to be born at a low birthweight, to have complications during birth, and to die during or immediately following birth than those born to mothers who received comprehensive prenatal care.

### Births to Women Receiving No Prenatal Care by Selected Status and County (2017)

The rates of women receiving no prenatal care while pregnant worsened from 2016 to 2017. Rates remained higher among teen mothers and among mothers with less than a high school diploma than among the general population of mothers, but rates worsened for all groups from 2016 to 2017. Read this table as: "Of all mothers between the ages of 15 and 19 who had a live birth, 4.8 percent of them received no prenatal care for that birth."

SOURCE: New Mexico Department of Health, Bureau of Vital Records and Health Statistics. Retrieved from the NM DOH Indicator-Based Information System for Public Health (IBIS), October, 2018 from http://ibis.health.state.nm.us. NOTE: Low birth counts may result in rates and percentages that are not indicative of the normal rate for that county and that may fluctuate widely over time due to random variation or chance. The rate for certain counties is suppressed by the NM DOH because the observed number of events is very small and not appropriate for publication, and for survey queries, rates calculated from fewer than 50 survey responses are suppressed. For this measure, suppressed rates for counties are designated by the \*\* symbol.

## **INFANT MORTALITY**

### Infant (Ages 0-1) Mortality Numbers and Rates by County (2017)

Infant mortality rates decreased from 2016 to 2017, dropping from 6.3 per 1,000 births in 2016 to 5.9 per 1,000 births in 2017, which translates to 14 fewer infant deaths. The infant mortality rate is the number of infants for each 1,000 live births who die within the first year after birth.

### CHILD HEALTH INSURANCE

### Children without Health Insurance by Income Level and County (2016)

Children without health insurance are less likely to get well-child visits, less likely to receive immunizations, and more likely to deal with untreated developmental delays and chronic conditions that can hinder healthy growth and learning. Low-income children - who are the majority (54 percent in 2016) of children in New Mexico – are less likely to have access to health insurance.

### **TABLES &**

### **HEALTH CHILD ABUSE**

### Substantiated Child Abuse by Type of Abuse and County (FY 2018)

A child abuse allegation is substantiated when it is determined that the victim(s) is under the age of 18, a parent or caretaker has been identified as the perpetrator and/or identified as failing to protect the victim(s), and credible evidence exists to support the conclusion by the investigation worker that the child has been abused and/or neglected as defined by the New Mexico Children's Code.

In Fiscal Year 2018 (from July 1, 2017 to June 30, 2018), for every 1,000 children under the age of 18 in New Mexico, approximately 15 were abused or neglected. This is a decrease from 25 children per 1,000 in FY 2017. The percentages should be read as follows: "In Fiscal Year 2018, of all substantiated allegations of child abuse, 24 percent were for physical abuse, 2 percent were for sexual abuse, and 73 percent were for physical neglect."

	Substantiated Child	Percent of Substantiated Abuse that is:

### TABLES & GRAPHS

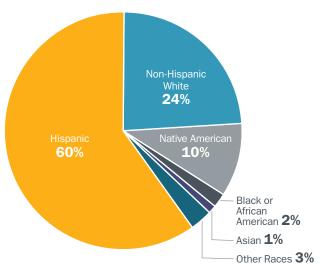

### **FAMILY & COMMUNITY**

### **POPULATION**

### Child Population (Ages 0-17) by Race and Ethnicity (2017)

New Mexico is ahead of the nation in having what is often referred to as a "minority-majority" child population, where the majority of the child population is not white. The U.S. child population is not expected to become minority-majority until at least 2020, but approximately three quarters of children in New Mexico are racial or ethnic minorities, with Hispanic children making up the largest group. Because children of color generally - and Hispanic children specifically - tend to fare worse in measures of child well-being, it is critical that policies are implemented that focus on racial and ethnic equity and that promote opportunities for children of color. The U.S. Census considers Hispanic an ethnicity rather than a race. Although people who identify as Hispanic may also identify as a race, all of the children in this data set who identify as a race are considered non-Hispanic.

**SOURCE:** U.S. Census Bureau, American Community Survey, 2012-2016, Table DP02.

Research shows that the education level of a parent - especially the education of a mother - is a strong predictor of how well a child will do in school and whether they will complete high school and go to college. Higher levels of education means parents are likely to have lower levels of unemployment, earn higher wages, and have more benefits such as health insurance and paid leave. Clearly, one way to improve school and life outcomes for children is to ensure that their parents have the resources to gain more education themselves.

#### DATA SOURCES

At this time, the New Mexico KIDS COUNT program does not design or implement primary research in the state. Instead, the program uses and analyzes secondary data and study findings provided by credible research and data collection institutions both in the state and the nation, such as the U.S. Census Bureau. The New Mexico KIDS COUNT staff make every effort to confirm that the data gathered and used are the most reliable possible. However, we rely on the data collection and analysis skills of those institutions providing this information. More information on data sources can be found in the "Major Data" Sources" section of this publication.

### DATA CONDITIONS

Some tables in this report do not provide data for all New Mexico counties or school districts. In order to provide the most up-to-date information possible we make every effort to utilize the most recent U.S. Census Bureau data sets (generally the American Community Survey, or ACS). Given this, however, a certain trade-off takes place, as data are not always available in certain time frames for certain geographic areas, like counties with smaller population sizes. For example, one-year estimates such as the 2017 ACS are released earlier in the year in 2018 and provide the most current data available, but are only published for geographic areas with a population of 65,000 or more. ACS five-year estimates (such as for 2012-2016) provide data for areas with fewer than 20,000 people (as well as for all larger areas), because in five years a large enough sample has been accumulated to provide accurate estimates for those areas. However, five-year estimates are released later in the year than one-year estimates. For these reasons, the New Mexico KIDS COUNT Data Book often includes state-level estimates that are more current than county-level estimates. In this year's book, most national and state-level data reported are from the 2017 one-year ACS, while most county and tribal data reported are from the 2012-2016 five-year ACS (the most recent five-year data set available at the time of this writing). It should be noted that a previously available three-year ACS was discontinued in 2015, so data from that series is no longer used and should not be considered for past years when doing a time series comparison.

The data presented in the different tables and graphs in this report may not be comparable to each other. This is due to several factors. These data come from a variety of sources that may use different sample sizes in their research and data collection methods. Data may also be derived from surveys or questionnaires that apply different definitions to key, measurable terms - such as "family" versus "household" (see below). In addition, statistics - such as percentages or rates - may be calculated for certain populations based on different universes (the total number of units – e.g., individuals, households, businesses – in the population of interest). The universe generally serves as the denominator when a percentage or rate is calculated. A percentage is a measure calculated by taking the number of items in a group possessing a certain quality of interest and dividing by the total number of items in that group, and then multiplying by 100. A rate is the number of items, events or individuals in a group out of a number – generally 1,000 or 100,000 – that fall into a certain category. Rates are determined by dividing the number of items possessing a certain quality of interest (like teens ages 15-19 giving birth) by the total number of items in the group (all teen females ages 15-19), and then multiplying the answer by 1,000. A rate is stated as the number "per 1,000" or "per 100,000."

### KEY U.S. CENSUS DEFINITIONS TO HELP IN UNDERSTANDING CERTAIN TABLES & GRAPHS

#### HOUSEHOLD & HOUSEHOLDER

A household includes all the people who occupy or live in a housing unit (apartment, house, mobile home, etc.) as their usual place of residence. A householder is the person in whose name the home is owned, mortgaged or rented. Households are classified by the gender of the householder and the presence of relatives, such as: married-couple family; male householder, no wife present; female householder, no husband present with own children; same-sex couple households; and the like.

#### FAMILY

A family includes a householder and people living in the same household who are related to that householder by birth, marriage or adoption and regarded as members of his or her family. A family household may have people not related to the householder, but they are not included as part of the householder's family in Census tabulations.

- So, though the number of families equals the number of family households, family households may include more members than do families.
- Families are classified as "Married-Couple Family," "Single-Parent Family," "Stepfamily," or "Subfamily."

#### TOTAL INCOME

Total income is the sum of the amounts reported separately for: wages, salary, commissions, bonuses, or tips; self-employment income from one's own non-farm or farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, or income from estates and trusts; Social Security or Railroad Retirement income; Supplemental Security Income (SSI); any public assistance or welfare payments from the state or local welfare office; retirement, survivor, or disability pensions; and any other sources of income received regularly, such as Veterans' (VA) payments, unemployment compensation, child support, or alimony.

- HOUSEHOLD INCOME, which is a summed number, includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not.
- FAMILY INCOME includes the summed incomes of all members 15 years old and over related to the householder; this summed income is treated as a single amount.

#### MEDIAN INCOME

Median income divides households or families evenly in the middle with half of all households and families earning more than the median income and half of all households and families earning less than the median income. The U.S. Census Bureau considers the median income to be lower than the average income, and thus, a more accurate representation.

#### **POVERTY LEVEL**

Poverty level can be difficult to interpret. The Census Bureau uses a set of income thresholds known as the federal poverty guidelines, which vary by family size and composition in order to determine who is poor. If total income for a family or individual falls below the relevant poverty threshold or the federal poverty level (FPL), then the family or individual is classified as being "below the poverty level." However, the poverty level is generally far below what a family actually needs in order to live at a bare minimum level (i.e., have sufficient food, a safe place to live, transportation, and health care). Most of the poverty levels used in 2018 New Mexico KIDS COUNT Data Book are for 2017. In 2017 the FPL was \$12,060 for one person or 24,600 for a family of four. However, a family of four at double (200 percent) the federal poverty level (\$49,200 in 2017) is considered to be "low-income," with just enough to cover basic family living expenses. For more information about the federal poverty guidelines, see https://aspe.hhs.gov/poverty-guidelines.

#### RACE & HISPANIC ORIGIN

The U.S. Census uses six race categories: White, Black or African American, American Indian/Alaska Native, Asian, Native Hawaiian/Other Pacific Islander, and Some Other Race, The term origin is used to indicate a person's (or the person's parents) heritage, nationality group, lineage, or country of birth. In addition, the Census uses two ethnic categories: Hispanic and Non-Hispanic. Hispanic (or Latino) refers to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. People who identify their origin as Spanish or Hispanic may be of any race.

### AMERICAN COMMUNITY SURVEY, U.S. CENSUS BUREAU

The majority of the data in the 2018 New Mexico KIDS COUNT Data Book come from the American Community Survey (ACS). The ACS provides annual data on demographic, social, housing, and economic indicators. The ACS samples nearly 3 million addresses each year, resulting in approximately 2 million final interviews. After a broad nationwide data collection test conducted between 2000 and 2004, full implementation of the survey began in 2005, with the exception of group quarters (such as correctional facilities, college dorms, and nursing homes), which were first included in the 2006 ACS. Certain changes were made to the ACS questionnaire on health insurance coverage, disabilities connected to military service, and marital history at the beginning of 2008. Each year, the ACS releases data for geographic areas with populations of 65,000 residents or more, and collects a sample over a five-year period to produce estimates for smaller geographic areas. In the late summer of 2018, one-year estimates for 2017 were released. The five-year estimates for 2017 are released in December of 2018.

American Community Survey data can be found on the U.S. Census webpage known as "American FactFinder".

### CENSUS 2010, U.S. CENSUS BUREAU

The federal government implements a national census every decade; the official 2010 Census results (known as "Census 2010") were released in 2011. Census data are collected from the entire population rather than a sample that is representative of the entire population (such as with the American Community Survey). Census data serve as the basis for redrawing federal congressional districts and state legislative districts under Public Law 94-171. Data from the U.S. Census can be accessed from the same FactFinder website as that of the American Community Survey or from its own website.

### SMALL AREA HEALTH INSURANCE ESTIMATES, U.S. CENSUS BUREAU

The Small Area Health Insurance Estimates (SAHIE) program provides health insurance estimates for all states and counties. At the county level, data are available on health insurance coverage by age, sex, and income.

### SMALL AREA INCOME AND POVERTY ESTIMATES. U.S. CENSUS BUREAU

The Small Area Income and Poverty Estimates (SAIPE) program, conducted by the U.S. Census Bureau with support from other federal agencies, provides select income and poverty data for states, counties, and school districts. Data are used for the administration of federal programs and allocation of federal funds to localities.

### NATIONAL ASSESSMENT OF EDUCATIONAL PROGRESS, NATIONAL CENTER FOR EDUCATION STATISTICS. U.S. DEPARTMENT OF EDUCATION

The National Assessment of Educational Progress (NAEP) is the largest nationally representative and continuing assessment of what America's students know and can do in various subject areas. Results from mathematics and reading assessments are based on representative samples of approximately 279,000 fourth-graders and 273,000 eighth-graders across the nation. Results are reported for public school students in all 50 states, the District of Columbia, and Department of Defense schools. Results from NAEP allow for comparison across states and between different racial, ethnic, gender, and income groups within states. While states may change how they measure reading and math proficiency, NAEP allows for a consistent measure across time periods, so that progress in a state can be tracked over time.

### DATA COLLECTION BUREAU, NEW MEXICO PUBLIC EDUCATION DEPARTMENT

The Data Collection Bureau at the state Public Education Department (PED) gathers data from public school districts throughout New Mexico. The data collected include the percentage of students receiving free and reduced-price lunches, student enrollment figures, student-to-teacher ratios, high school graduation rates, and more.

Starting in the 2014–2015 school year, the NM PED started measuring reading and math proficiency using a different test than in years past. The New Mexico's Standards Based Assessment (SBA) was replaced with the New Mexico Partnership for the Assessment of Readiness of College and Careers (NM PARCC) assessments that were developed to measure the mastery of the New Mexico Common Core State

Standards (NM CCSS). Because assessments for reading (now measured as "English Language Arts") and math are different than in previous years, the NM PED test score data from the school year that ended in 2015 and years forward cannot be directly compared with test scores from previous years.

### MEDICAL ASSISTANCE DIVISION, NEW MEXICO HUMAN SERVICES DEPARTMENT

Medicaid - also called New Mexico Centennial Care - is administered by the Medical Assistance Division of the state Human Services Department (HSD). Medicaid enrollment numbers are reported for children under age 21 (including Native American children) by county. Medicaid eligibility reports can be found on the NM HSD website.

### BUREAU OF VITAL RECORDS AND HEALTH STATISTICS. **NEW MEXICO DEPARTMENT OF HEALTH**

The New Mexico Bureau of Vital Records and Health Statistics tabulates vital records data to analyze the health status of New Mexicans. The two major data systems are the files for births and deaths. The birth file contains data on demographic characteristics of newborns and their parents. Data on mothers' pregnancy history and medical risk factors are included. The death file contains demographic data on decedents, which are provided by funeral directors, and the causes of death, which are provided by physicians or medical investigators. These data can be accessed on the state Department of Health's Indicator-Based Information System (NM-IBIS) website.

### EPIDEMIOLOGY AND RESPONSE DIVISION, NEW MEXICO DEPARTMENT OF HEALTH

New Mexico's Indicator-Based Information System (NM-IBIS) is maintained by the Epidemiology and Response Division. This public health database provides up-to-date statistics from a variety of state health department divisions, including data on birth, death, and disease incidence. There is a health status indicator report section, as well as a direct query section where users can define their specific data requests and get responses in tabular and graph formats. Data are, in general, now available in table, chart, and geo-mapped formats.

### RESEARCH, ASSESSMENT, AND DATA BUREAU OF PROTECTIVE SERVICES DIVISION, NEW MEXICO CHILDREN. YOUTH & FAMILIES DEPARTMENT

The Protective Services Division (PSD) is the state agency designated to administer child welfare services in New Mexico. PSD strives to enhance the safety and well-being of children and the permanency of families in New Mexico by receiving, investigating, and taking action on reports of children in need of protection from abuse and/or neglect by their parent, guardian or custodian. The Research, Assessment, and Data Bureau

collects and reports PSD data. The "360 Yearly Annual Report" is published annually on a state fiscal year basis, and contains annual child abuse and neglect data by state and county. PSD publications, including the "360 Yearly" report can be found on the NM CYFD website.

### OFFICE OF SCHOOL AND ADOLESCENT HEALTH (OSAH), NEW MEXICO DEPARTMENT OF HEALTH

The Office of School and Adolescent Health works to improve student and adolescent health through integrated school-based or school-linked health services. OSAH also engages in adolescent health promotion and disease prevention activities directly and through collaboration with public and private agencies across New Mexico. The office oversees and provides data from the biannual high school and middle school Youth Risk and Resiliency Survey (YRRS), which is published every two years and covers risk behaviors and resiliency factors.

### ANNIE E. CASEY FOUNDATION

The Annie E. Casey Foundation has funded the KIDS COUNT initiative since 1990 and publishes an annual data book highlighting the well-being of children across the country. The Foundation also provides expert data analysis and supports custom data requests from its state-level KIDS COUNT organizations through the Population Reference Bureau. Using data from the U.S. Census Bureau, and National Center for Health Statistics, and other national data sites, the Foundation also provides information at its online data center for each state, the District of Columbia, and Puerto Rico, as well as by topic, such as immigration, poverty, education, employment, and income. The KIDS COUNT Data Center provides mapping, trend and bar charting, and other services relevant to the data presented. It can be found at http://datacenter.kidscount.org.

### NEW MEXICO COMMUNITY DATA COLLABORATIVE

The New Mexico Community Data Collaborative (NMCDC) is a geo-mapping data site that is connected to and intended to be integrated with the NM-IBIS system. Made up of a network of public health analysts and advocates from a dozen or more state agencies and non-government agencies, the NMCDC operates an interactive website at ArcGIS Online where users share extensive data sets from multiple sources in the state. It is meant to share neighborhood-level data with local organizations that promote community assessment, child health, and participatory decision-making in the state. NMCDC maps contain aggregated data for more than one thousand indicators organized by subcounty areas such as census tract, zip code, school districts, and other administrative boundaries. In addition, users will find site-specific information for public schools, licensed facilities, and other public services.

#### **ECONOMIC POLICY INSTITUTE**

The Economic Policy Institute (EPI) is a nonprofit, non-partisan organization that produces reports about conditions facing low- and middle-income families in the areas of education, the economy, living standards, and the labor market, publishing the highly respected annual report *The State of Working America*.

### U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

The U.S. Department of Health and Human Services provides poverty guidelines that are a simplified version of the federal poverty thresholds and are used for determining eligibility for various federal programs. The poverty thresholds are issued by the U.S. Census Bureau to calculate poverty population statistics (e.g., the percentage or number of people living in poverty in a particular area).
